

Case 2 – Flight Reservations

Business needs

- Record confirmed passenger reservation everyday
- Check the VIP status of different passenger to provide different special privileges, such as lounge, priority boarding and welcome drink
- Check the Food Allergies status of different passenger to prevent providing allergic meal to passenger and inform flight kitchens to prepare appropriate food
- List the Special Assistance status of different passenger to provide advanced action, such as prepare one more seats for assistance dog, pay attention to passenger who have medical device
- List the Special Requests status of different passenger on their flight to provide advanced action, such as provide child meal and vegetarian meal to passenger, prepare one more seats for wheel chair, provide advanced action to over-sized luggages and overweight luggages
- Provide the status summary including which flight is the most popular during a week

Database Design

Six Table and One Logical View

Table FLIGHT

Basic information of each flight,

Flight_No is primary key and provide the number of each flight

Flight_FromCity and Flight_DepartureTime provide departure time and city

Flight_ToCity and Flight_ArrivalTime provide arrival time and city

Flight_TotalTime provide total time of each flight

Flight_TotalSeats provide total seats of each flight

Table PASSENGER

Basic information of each passenger,

Passenger_No is primary key

Passenger_FirstName and Passenger_LastName provide the first name and last name of each passenger

Passenger_Gender provide the gender of each passenger

VIP_Code is a foreign key to link with table VIP to provide the level of VIP and special privileges

Passenger_PassportNumber provide the passport number of each passenger

Passenger_Nationality provide the nationality of each passenger

Passenger_Birthday provide the birthday of each passenger

Passenger_PhoneNumber provide the phone number of each passenger

Passenger_Email provide the email of each passenger

Passenger_AssistanceDog include a value either YES or No to determines the special need of assistance dog

FoodAllergies_Code is a foreign key to link with table FOODALLERGIES and provide information of food allergies on each passenger

Passenger_MedicalDevice include a value either YES or No to provide the special need to passenger who have medical device

Table CLASS

Basic information of each cabin,

Class_Code is primary key and provide the alphabet represent different cabin

Class_Cabin provide different cabin

Table VIP

Basic information of each VIP level,

VIP_Code is primary key and represent different VIP level

VIP_Lounge include a value either YES or No to determines the permission of entry the lounge on the airport

VIP_PriorityBoarding include a value either YES or No to determines the order of priority boarding between VIP and non-VIP

VIP_WelcomeDrink include a value either YES or No to provide the welcome drink to the VIP of 'Gold' level

Table FOODALLERGIES

Basic information of different food allergies,

FoodAllergies_Code is primary key and provide the special code to represent different allergic food

FoodAllergies_Food include different allergic food

Table INVOICE

Basic information of different invoice of different passenger,

Invoice_No is primary key and represent different number of invoice

Invoice_Date is the date of the flight

Flight_No is a foreign key and link to the primary key “Flight_No” of table FLIGHT and state the flight number which passenger will take

Passenger_No is a foreign key and link to the primary key “Passenger_No” of table PASSENGER in order to state the information of each passenger

Class_Code is a foreign key and link to the primary key “Class_Code” of table CLASS in order to state the class

Invoice_SeatRow provide the row of seat of each passenger on the flight

Invoice_SeatNo provide the no of seat of each passenger on the flight

Invoice_ChildMeal include a value either YES or No to determines the child meal of each passenger

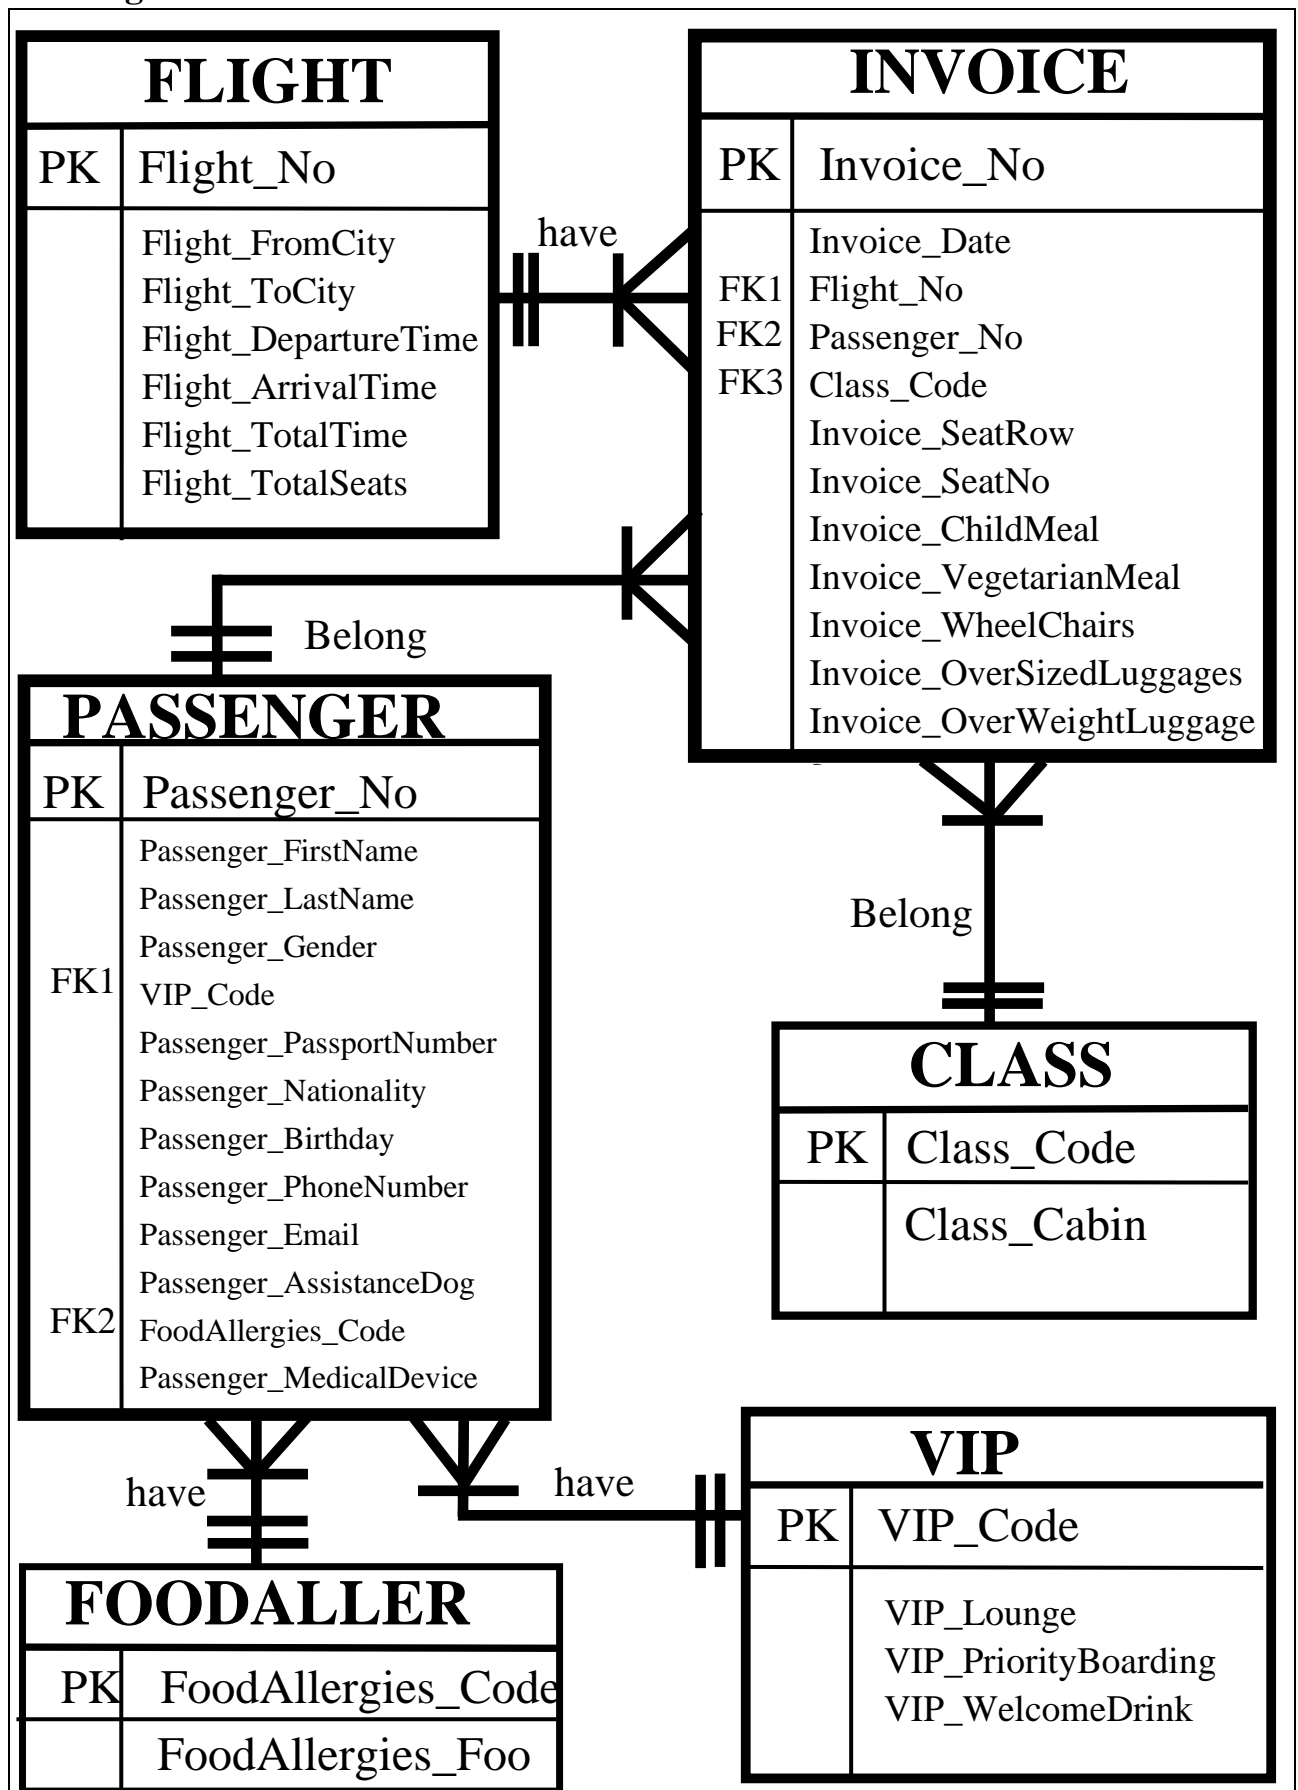

Invoice_VegetarianMeal include a value either YES or No to determines the vegetarian meal of each passenger

Invoice_WheelChairs include a value either YES or No to determines the special need of wheel chairs

Invoice_OverSizedLuggages include a value either YES or No to show the over sized luggages on each passenger

Invoice_OverWeightLuggages include a value either YES or No to determines the overweight luggages on each passenger

“Overweight Luggages” is the most requested during a week on flight reservation

2. List the most popular row and seat that customer chosen

i. most popular row:

```
select INVOICE.Invoice_SeatRow, INVOICE.Class_Code,  
count(INVOICE.Invoice_SeatRow) as MostPopularRow  
from INVOICE  
GROUP BY INVOICE.Invoice_SeatRow  
ORDER BY MostPopularRow DESC;
```

Sample Results:

The screenshot shows a database query result in a dark-themed interface. The table has three columns: Invoice_SeatRow, Class_Code, and MostPopularRow. The data is sorted by MostPopularRow in descending order. The first two rows (1 and 9) both have a MostPopularRow value of 4. The interface includes a toolbar with icons for query execution and a status bar indicating 'Total rows loaded: 27'.

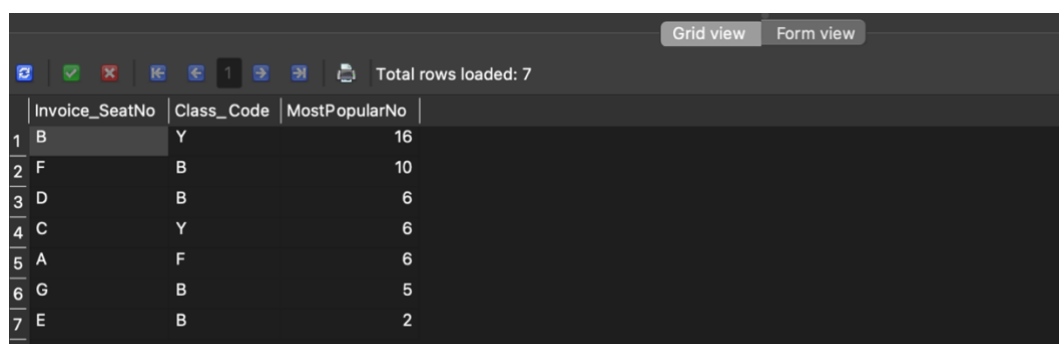

Invoice_SeatRow	Class_Code	MostPopularRow
1	F	4
25	Y	3
20	Y	3
10	B	3
8	B	3
7	B	3
2	F	3
36	Y	2
22	Y	2
21	B	2
15	B	2
4	F	2
3	F	2
45	Y	1
42	Y	1
35	B	1
30	B	1
29	B	1
23	Y	1
19	B	1
18	B	1
17	B	1
14	Y	1
13	B	1
12	B	1
5	B	1

The most popular row is Row 1 and Row 9.

ii. most popular seat:

```
select INVOICE.Invoice_SeatNo, INVOICE.Class_Code,  
count(INVOICE.Invoice_SeatNo) as MostPopularNo  
from INVOICE  
GROUP BY INVOICE.Invoice_SeatNo  
ORDER BY MostPopularNo DESC;
```

Sample Results:

The screenshot shows a database query result in a dark-themed interface. The table has three columns: Invoice_SeatNo, Class_Code, and MostPopularNo. The data is sorted by MostPopularNo in descending order. The first row (B) has a MostPopularNo value of 16. The interface includes a toolbar with icons for query execution and a status bar indicating 'Total rows loaded: 7'.

Invoice_SeatNo	Class_Code	MostPopularNo
B	Y	16
F	B	10
D	B	6
C	Y	6
A	F	6
G	B	5
E	B	2

The most popular seat number is seat B.

3. List all passenger on the most popular flight(CFX75) in a week and its VIP special service

```
select INVOICE.Flight_No, INVOICE.Passenger_No,  
PASSENGER.Passenger_FirstName, PASSENGER.Passenger_LastName,  
PASSENGER.VIP_Code,  
VIP.VIP_Lounge, VIP.VIP_PriorityBoarding, VIP.VIP_WelcomeDrink  
from INVOICE, PASSENGER, VIP  
where INVOICE.Flight_No like "CFX75" and INVOICE.Passenger_No =  
PASSENGER.Passenger_No and PASSENGER.VIP_Code = VIP.VIP_Code;
```

Sample Results:

Grid view Form view								
Total rows loaded: 8								
	Flight_No	Passenger_No	Passenger_FirstName	Passenger_LastName	VIP_Cod	VIP_Lounge	VIP_PriorityBoarding	VIP_WelcomeDrink
1	CFX75	MG547861	George	Miller	Bronze	NO	YES	NO
2	CFX75	CD346951	David	Cheung	Bronze	NO	YES	NO
3	CFX75	JL658728	Linda	Jones	Sliver	YES	YES	NO
4	CFX75	DB589398	Brian	Davis	Bronze	NO	YES	NO
5	CFX75	DL935347	Ludd	Davis	Sliver	YES	YES	NO
6	CFX75	SJ234356	James	Smith	Bronze	NO	YES	NO
7	CFX75	CJ568971	Jacky	Chung	Gold	YES	YES	YES
8	CFX75	BJ348396	Jennifer	Brown	Bronze	NO	YES	NO

All of the passenger on the most popular flight both have "Priority Boarding".

4. List the total people of different food allergies

```
select PASSENGER.FoodAllergies_Code, COUNT(PASSENGER.FoodAllergies_Code) as  
MostAllergiesFoodOnOurPassenger  
from PASSENGER  
GROUP BY PASSENGER.FoodAllergies_Code  
ORDER BY MostAllergiesFoodOnOurPassenger DESC;
```

Sample Results:

Grid view Form view		
Total rows loaded: 9		
	FoodAllergies_Code	MostAllergiesFoodOnOurPassenger
1	0	20
2	2103	3
3	2109	1
4	2108	1
5	2107	1
6	2105	1
7	2104	1
8	2102	1
9	2101	1

"0" mean passenger don't have food allergies and most of passengers don't have food allergies but there are at least 3 passengers have milk allergy.

5. List all passenger who need to pay attention and tack care to them, such as medical device and assistance dog

i. medical device

```
select INVOICE.Invoice_Date, INVOICE.Flight_No, INVOICE.Passenger_No,
INVOICE.Invoice_SeatRow ,INVOICE.Invoice_SeatNo,
PASSENGER.Passenger_FirstName, PASSENGER.Passenger_LastName,
PASSENGER.Passenger_Gender, PASSENGER.Passenger_MedicalDevice
from PASSENGER, INVOICE
where INVOICE.Passenger_No = PASSENGER.Passenger_No and
PASSENGER.Passenger_MedicalDevice like "%yes%";
```

Sample Results:

Assumptions and Limitations

- All passengers have their flight during a period (2022/04/05 to 2022/04/11)
- If first time user booked a flight ticket on our flight reservations, it will become the basic VIP level – bronze level and record it on the database
- How Passenger use our Flight Reservations
 - Passenger will enter their information, such as name, gender, passport number, their VIP code and select their special needs (Assistance Dog, Food Allergies, Medical Device)
 - Then Passenger will choose their flight, Cabin, Seat Row and number, also select their special request (Child Meal, Vegetarian Meal, Use of wheel chairs, Over-sized Luggages, Overweight Luggages)
 - Above steps must not contain blank information and must not skip each step
- If a passenger didn't choose their flight, database will only save his/her information and will not have his/her own invoice
- If a flight was cancelled due to different cause and deleted on table FLIGHT, flight number on table INVOICE will be error and be confusing as they are no corresponding foreign key on table FLIGHT
- If a passenger have food allergies that do not include in table "FOODALLERGIES", it will not record it as the flight reservations only allow passenger choose the allergy food and they can't type it on the flight reservations. It neglect the real situation of different people.

Conclusion

This design basically supports the stated requirements. In future, this design should be enhanced to cater for:

- Passenger not entering some unimportant information
- Summary on passenger who have not use our flight reservation system in a year
- Summary on passenger who always use our flight reservation system in a year
- Summary on passenger who always requests different special requests in a year
- Summary on gold VIP level passenger and which flight is the most taken among gold VIP level passenger
- Summary on how passenger choose the cabin under different situation, such as total flight time, destinations
- Not enforcing passenger become a bronze level VIP after they use our flight reservation system, system can add a Non-VIP on VIP code
- System also can add a visitors function. Under the visitors function, visitors can browse our system to check the time or destination of flight without entering personal information and becoming a VIP
- Allow passenger enter their allergy food which is not include in our list to protect the health of passenger and flight company
- Allow passenger enter their special requests in a comment box which is not include in the part of special requests or add more new special requests, such as require a window seats or aisle seats, require to seat with his/her family member, passenger with wheelchair or with children require to priority boarding, require an emergency exit row seat to have more space, require a seat which is far away from toilet or close to the kitchen
